I feel as an individual who pays for a service such as XM Radio or from any Satellite Radio company, that there should be some public service offered. Since this service is paid for by individuals and our choice for commercial free or limited commercial radio is coming to our car, home or office, then we should not be penalized the restriction of these broadcasts. But the one thing I want to know is what bug is up both of these Representatives asses or who is really lobbying against the future of alternative broadcasting.
